## The award ceremony for the National Commendation for Invention for the year Reiwa 7 was held.

At the National Commendation for Invention for the year Reiwa 7, organized by the Japan Institute of Invention and Innovation (JIII, HATSUMEI KYOKAI), Nissan Chemical Corporation received the Prize of the Chairman of JIII for its invention of “The photo-alignment layer that enables high-quality display in leading edge liquid crystal displays.” The award ceremony was held on July 1.

In this fiscal year, among countless entries and recommendations from across the country, the following awards have been designated for presentation; In the first Commendation Division, the Imperial Invention Prize for 1 project, the Special Prize for 10 projects, and the Invention Prize for 10 projects; In the Second Commendation Division, the Future Creative Invention Prize for 1 project.

Following last year's Invention Prize, this year our company received the Prize of the Chairman of JIII, one of the ten Special Prizes and the Distinguished Service Prize for Employment of Invention.

Nissan Chemical Corporation will continue to create excellent inventions that contribute to our business growth.
